KEEPING PACE

The last 20 years in the life sciences industry have seen the introduction of ever evolving requirements for validation and compliance. These requirements have paid off significantly for the end consumer with safer drugs. However, from the manufacturer's perspective, they represent an additional manufacturing cost, one that is escalating to keep up with increasing regulatory complexity.

As validation requirements have grown, the process of validating computer systems has not kept pace. The result is a validation process that can be unnecessarily onerous, inconsistent and error prone.

Life science companies know that a dollar spent on compliance and validation does not generate a corresponding dollar in revenues; nor does that compliance dollar generate innovative ideas for the pipeline.

This poses a challenge within the industry: how to meet or exceed compliance requirements while containing the cost to the organization.

SOLUTION

Compliance Associates has the solution: *Validator*. This is the first validation software solution, developed by validation specialists for validation professionals. It automates and standardizes the validation process, and provides numerous benefits.

VALIDATOR: Validation Software Solution that *Delivers*

Validator enables and automates your compliance through a strategic framework for Computer Systems Validation, risk management and 21 CFR Part 11.

Validator provides an intuitive walkthrough approach for planning, risk assessment, validation methodology, test case design/development/ execution, and change control with complete traceability.

Information is collected in a centralized repository, allowing for quick retrieval and reuse.

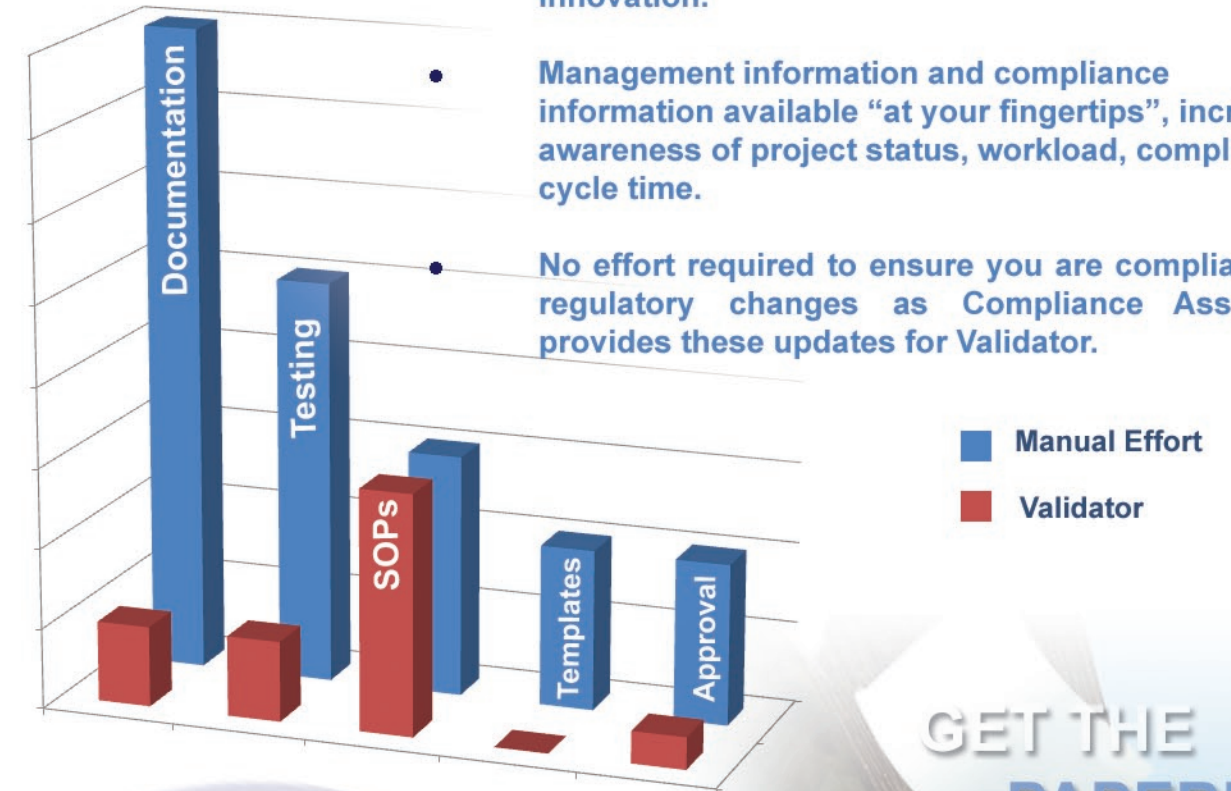

Electronic routing and approval of documents dramatically shortens approval time, increasing integrity and reducing cycle time through use of a comprehensive, flexible secure electronic workflow.

Validator allows for "copy project" capability to reuse past project efforts to further reduce cycle times on similar projects and also contains integrated validation training and certification.

Validator accommodates prospective, retrospective and revalidation.

- Accelerated validation lifecycle; standardization and consistency with respect to the validation process. Pilot installations have shown that using Validator improves productivity by 50% - 70% compared to traditional manual validation.
- Increased compliance, reduced errors, redeployment of validation resources to core competencies of drug innovation.
- Management information and compliance information available "at your fingertips", increasing awareness of project status, workload, compliance, cycle time.
- No effort required to ensure you are compliant with regulatory changes as Compliance Associates provides these updates for Validator.

It IS possible to Optimize Validation AND Increase Compliance!
