Improve the Process of Equipment qualification and Software Validation

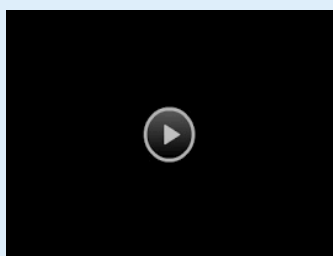

The Development Translational Medicine Laboratories at Biogen needed to streamline the process and delivery of its equipment and software validation. To do this, they required a vendor who could provide the right implementation methodology, had extensive knowledge of the life sciences industry, and an automated solution for validation that could seamlessly integrate Biogen's complex delivery life-cycle.

Computer System Validation- How Much to Validate?

How much to validate is the biggest challenge facing validation professionals and their organizations. Deciding how much to validate is a delicate balance between satisfying compliance requirements and the time it takes to implement critical technologies.
